FACADE COMPOSITE PANELS

etalbond

etalbond is a first-class sandwich-type composite panel consisting of a non-toxic polyethylene core firmly bonded between fine aluminium facing and backside sheets. etalbond sheets are produced in different core thicknesses 2, 3 and 5mm with aluminium sheets of 0.5, standard sheet widths of 1000, 1250 and 1500 mm and lengths 2000 up to 7000 mm.

etalbond fr

etalbond fr, due to its mineral core meets the stricter requirements of the fire classifications. It is hardly inflammable, while maintaining all the important characteristics of normal etalbond®, such as resistance to weather, flatness and simple forming techniques.

FACADE PAINTED SOLID SHEET & COIL

ELVAL ENF

Having recently completed significant investments in its production facilities, ELVAL COLOUR now offers a wide array of premium quality painted Aluminium Sheet and Coil products for building cladding in Plain, profiled and stucco finishes. ENFTM is offered as a painted material with VHDPE or PVDF type of paint and has been approved by cladding fabricator specialists in the most extreme environments, such as Arctic (Iceland, Russia), Tropical (Dubai, UAE) and Maritime (Israel, Australia)

INTERNAL CLADDING

While the huge variety of available decorative solutions remains the primary reason for its use as a specialised interior cladding medium, coil coated aluminium can be also used in applications such as acoustic ceilings or ceiling sidings. In most cases it also works as an additional layer of thermal insulation.

ROOFING COILS

COILS FOR ROOFING

Elval Colour pre-painted aluminium coils & sheets for roofing applications meet the most demanding construction and design requirements without making any compromise in quality. The lightness of aluminium together with its proven durability (offered through our specially developed strengthened alloys) makes it the ideal choice for creating corrugated or standing seam roofing solutions with limitless design potential, innovative colours and surface finishes.

CORRUGATED SHEETS

Our Corrugated aluminium products designed for roofing or façade systems offer a high degree of corrosion resistance and consequently a significant potential for energy efficiency, and economical sustainability. Made out of a relatively thin sheet aluminium, they can be a practical alternative solution for commercial, agricultural, industrial, and sometimes residential buildings.
